

Goals for Day 2

- Translate business goals into actionable technical requirements.
- Draft a high-level system architecture and detailed workflows.
- Plan API requirements and backend integrations with tools like Sanity CMS.
- Create professional documentation that mirrors industry best practices.

Frontend Needs: User-friendly interface with responsive design.

Backend Using Sanity CMS: Manage product data, customer details, and orders.

Third-Party APIs: For payment gateways, shipment tracking, and other backend tasks.

Order Data: Sanity Schemas.
